

Saanthvana meeting minutes

Prepared 21 September 2026 | Product review and Round 1 submission

Meeting date is unconfirmed. The transcript has no reliable speaker labels; action owners remain unassigned.

Decisions

Focus and navigation. Keep patients and caregivers as beneficiaries, with the care conversation at the centre. Combine patient/family entry; organise Clinical documents, Access to care and My space, plus quick access to an offline-saveable QR.

Clinical note. Use the team's Healthathon form. Reuse patient and oncologist profile details; record the family members present for each discussion.

Review and versions. Doctor signs first, then patient/family reviews from their account. Record agreement explicitly; use Review & sign or Finish later. Distinguish discussion notes from recorded decisions. Lock the signed version and prefill the next discussion from the previous note.

Useful care features. Keep a symptom diary with a 0-10 scale, personal journal/mood records, and vetted palliative-care listings with service details, calls and directions.

Documents and calendar. Separate PET/biopsy/cancer documents from CBC/LFT/KFT monitoring; show dated results together. Prioritise chemotherapy/radiotherapy milestones. Medication reminders should come from typed prescriptions, not manual entry or handwriting.

Reduce clutter. Remove cost-help/fundraising and family tasks from the main flow. Keep home help focused on nursing, transport and medicines/supplies; remove caregiver-break and paperwork items.

Actions

ACTION	OWNER
Apply the agreed navigation, scope and clinical note changes.	Team / TBD
Investigate state medical-registration verification and multi-speaker transcription.	Team / TBD
Add search/briefing from uploaded documents, with source citations and a clear not-found result. Assess typed-prescription alerts.	Team / TBD
Revise the eight-slide deck around the care conversation; include the product URL/QR and walkthrough/repository links.	Team / TBD

Review and submission

Next review proposed for the 23rd; final review/upload target the 24th; deadline discussed as the 25th. Month/year and meeting time were not stated.

Open items

External doctors must be able to read a shared note without installing the app. Single-use links, QR access, downloading/printing and the limits of revocation still need resolution.

Community/support groups, private-journal data use and privacy requirements remain open. Verify additional centre facilities, including imaging and ambulance services; validate extraction and reminder accuracy.
