When the care conversation gets lost

Mannar, Kerala · PIB photograph, 2011 · Not the story patient.

Imagine a 62-year-old woman with advanced breast cancer receiving best supportive care.

Families need the care plan, medicines, appointments and help in one place.

At the clinic

Her doctor discusses her wishes. Only her husband attends.

Two months later

She becomes unconscious and reaches hospital. The doctor asks what she would want if her heart stopped.

The family disagrees

Her husband says yes. Her daughter says no. Her son calls from another city. No one can find the earlier discussion.

Why families need support between visits

 **15.6 lakh**

Estimated new cancer cases in India in 2024.

[IARC, GLOBOCAN 2024](#)

 **98.39%**

Estimated unmet palliative-care need among people whose cancer had spread, across 10 cancer types.

[Patil et al., 2024](#)

 **88%**

Wanted to choose their treatment near the end of life in a 2019 survey of 2,400+ urban respondents.

[IndiaSpend reporting: seven cities](#)

 **11.5%**

45 of 391 doctors at one hospital had training in advance directives, which record wishes for future care.

[Jacob et al., CMC Vellore, 2026](#)

One Chennai hospital improved documentation.

A standard process helped staff write down care discussions for 24 of 26 eligible patients.

Advanced pancreatic / colorectal cancer.

[Thangasamy et al., 2025](#)

Each study looked at a different group of people. These figures are not results from Saathi.

Saathi keeps your cancer care in one place.

[Find a centre and call to confirm.](#)

AI prepares the note. People check and sign it.

The conversation stays with the family after the visit.

A screenshot of a mobile application interface for creating voice notes. The interface is dark blue. At the top, there is a microphone icon in a circle. Below it, the text 'Voice note' is displayed. A toggle switch is labeled 'Everyone agreed to recording and live captions'. Below this is a large 'Start recording' button. A language dropdown menu is set to 'English'. At the bottom, there is a dashed box labeled 'Upload audio'.

**Every signed Care Note
stays in the history.**

**1. Record with
permission.**

**2. AI prepares a
draft.**

**3. The doctor
checks and
signs.**

**4. The patient
reviews and
signs.**

[Planned with Sarvam AI: Indian-language speech, translation and read-aloud.](#)

AI helps families and doctors use patient records.

With the patient's permission, find answers and see the original passage.

The screenshot shows a user interface for searching patient records. At the top, there is a search bar with the text "What should I bring to my next visit?" and a "Find" button. Below the search bar, there are four filter buttons: "What should I bring to my next visit?", "What matters to me?", "My latest haemoglobin", and "Treatment dates". Below these filters, there are four tabs: "All files" (4), "Cancer care" (1), "Blood & lab tests" (2), and "Other" (1). The main content area is titled "From your documents" and shows a document titled "visit-checklist-2026-09-23.pdf" dated "23 Sept 2026". The document content includes: "Next appointment: 25 September 2026, 11:00 AM.", "Visit preparation: Bring previous reports and the current prescription.", and "Questions to ask: Who should we contact between visits?". Below the document content, there are two buttons: "Add treatment date" and "Read document". A "Back to files" button is located in the top right corner of the document preview area. At the bottom right of the document preview area, there is a link "View original".

1. Add a report.

Or a printed prescription.

2. Ask in your own words.

3. Check the original text.

Keep treatment dates in order.

Check medicine reminders before saving.

Will Saathi make care easier to organise?

60–90 days

Proposed clinic study
