A family is asked to decide without knowing her wishes

A 62-year-old woman with advanced breast cancer receives best supportive care.

Illustrative consultation photo.

At the clinic

Her doctor discusses her wishes. Only her husband attends.

Two months later

She becomes unconscious and is brought to the Emergency Department. The doctor asks if she wanted CPR if her heart stopped.

The family has not agreed

Her husband says yes; her daughter says no. Her son pays for her treatment but is unavailable. The family has not agreed, and her earlier note is missing.

Her family needs a clear record of what she wanted.

Cancer care needs support between visits

15.6 lakh

Estimated new cancer cases in India in 2024.

IARC, GLOBOCAN 2024

98.39%

Estimated unmet palliative-care need in metastatic disease across 10 cancer types.

Patil et al., 2024

88%

Surveyed patients wanted to choose their end-of-life treatment. 2,400+ urban respondents with a recent hospital stay (2019).

IndiaSpend; seven-city survey

11.5%

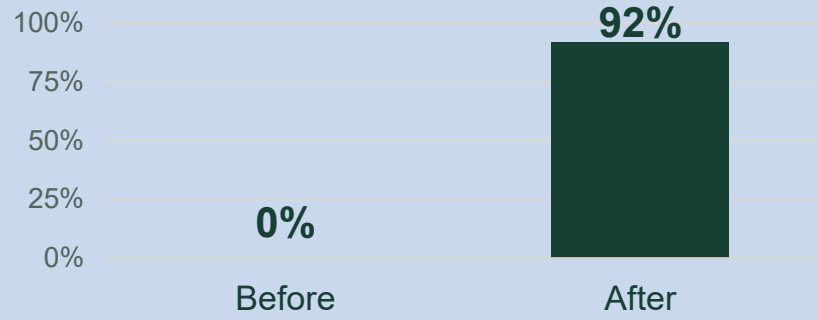

45/391 doctors had training in advance directives and their practical aspects. One hospital.

Jacob et al., CMC Vellore, 2026

Different study groups. These are not results from Saanthvana.

Goals-of-care discussion

A clinician-led conversation about a patient's values, priorities and care preferences, used to agree care goals with the patient and, with consent, their family.

A standard procedure improved goals-of-care documentation to 92% (24/26 eligible patients).

Advanced pancreatic / colorectal cancer, Chennai.

Thangasamy et al., 2025

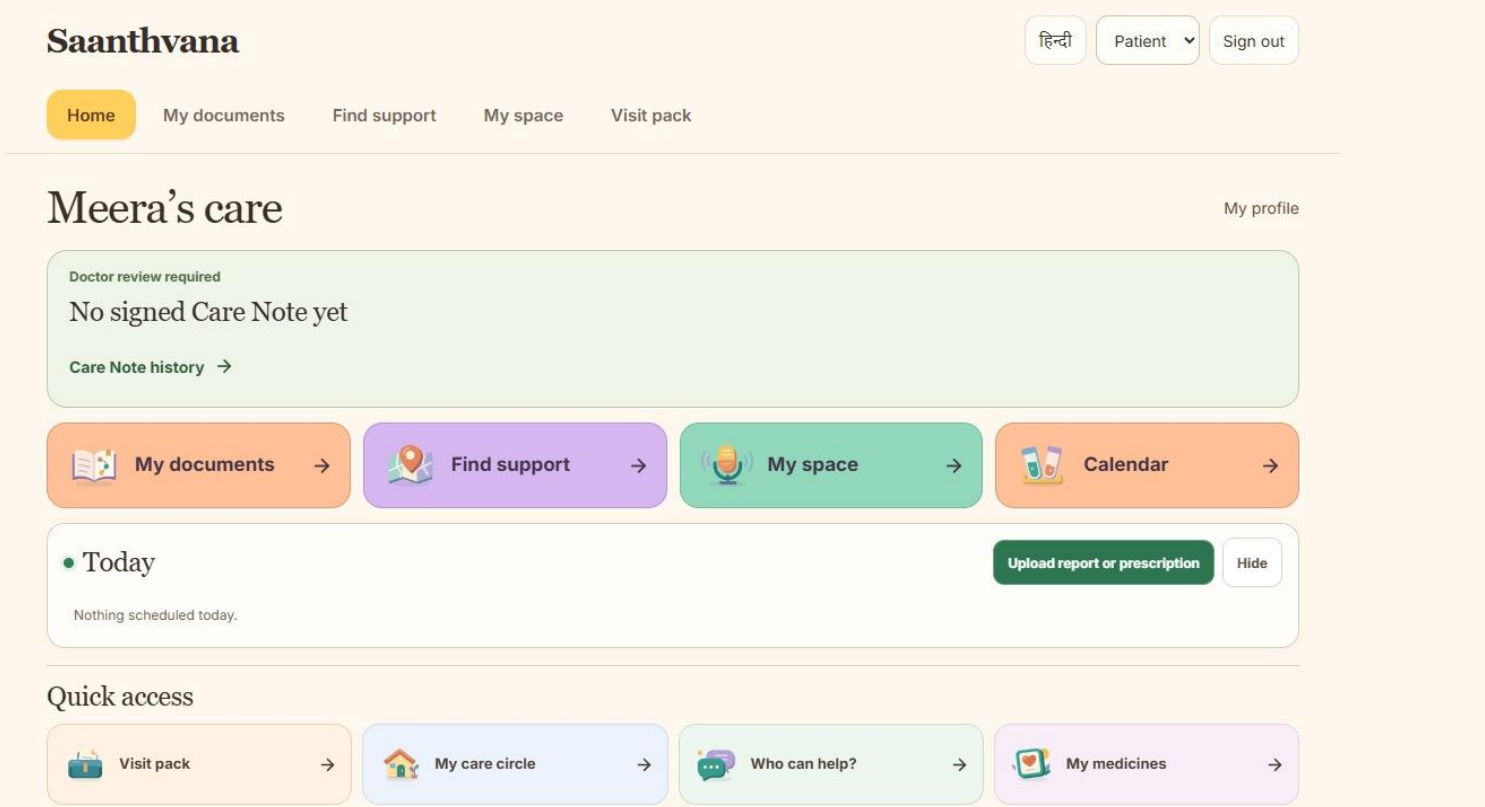

Proposed 60-90 day study: compare before and after

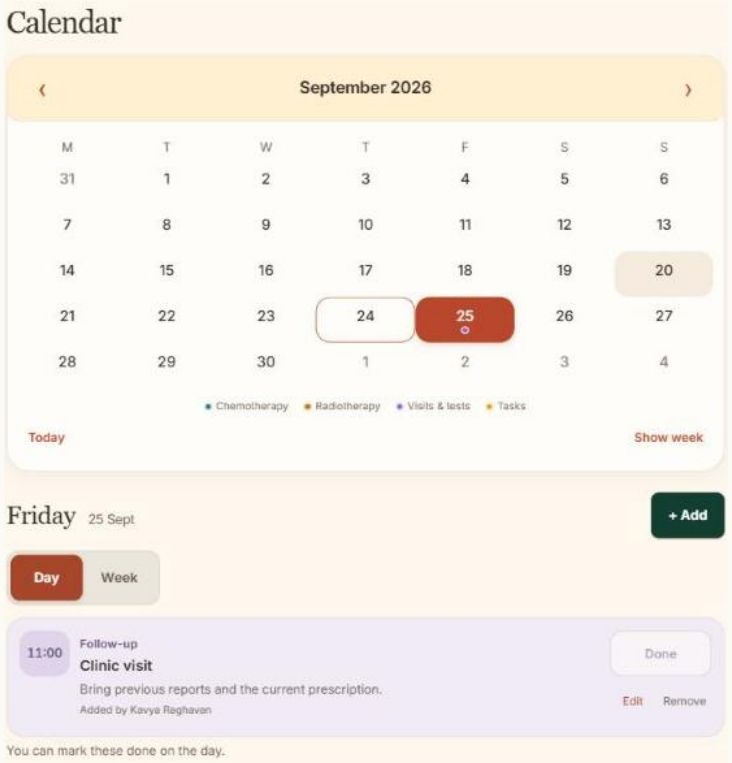

Number of patient- and doctor-initiated goals-of-care discussions.

Number of written and signed Care Notes per cancer facility.

Time to retrieve goals-of-care discussions during an emergency.

Saanthvana keeps your cancer care in one place

- [Medicines and prescription reminders]
- [Visits, tests and treatment dates]
- [Journals and symptom tracking]
- [Financial tracking]

Three sign-ins

Physician leads. AI assists

The physician initiates the goals-of-care discussion. AI provides a structured guide.

Every version of the goals-of-care discussion stays in the Care Note history.

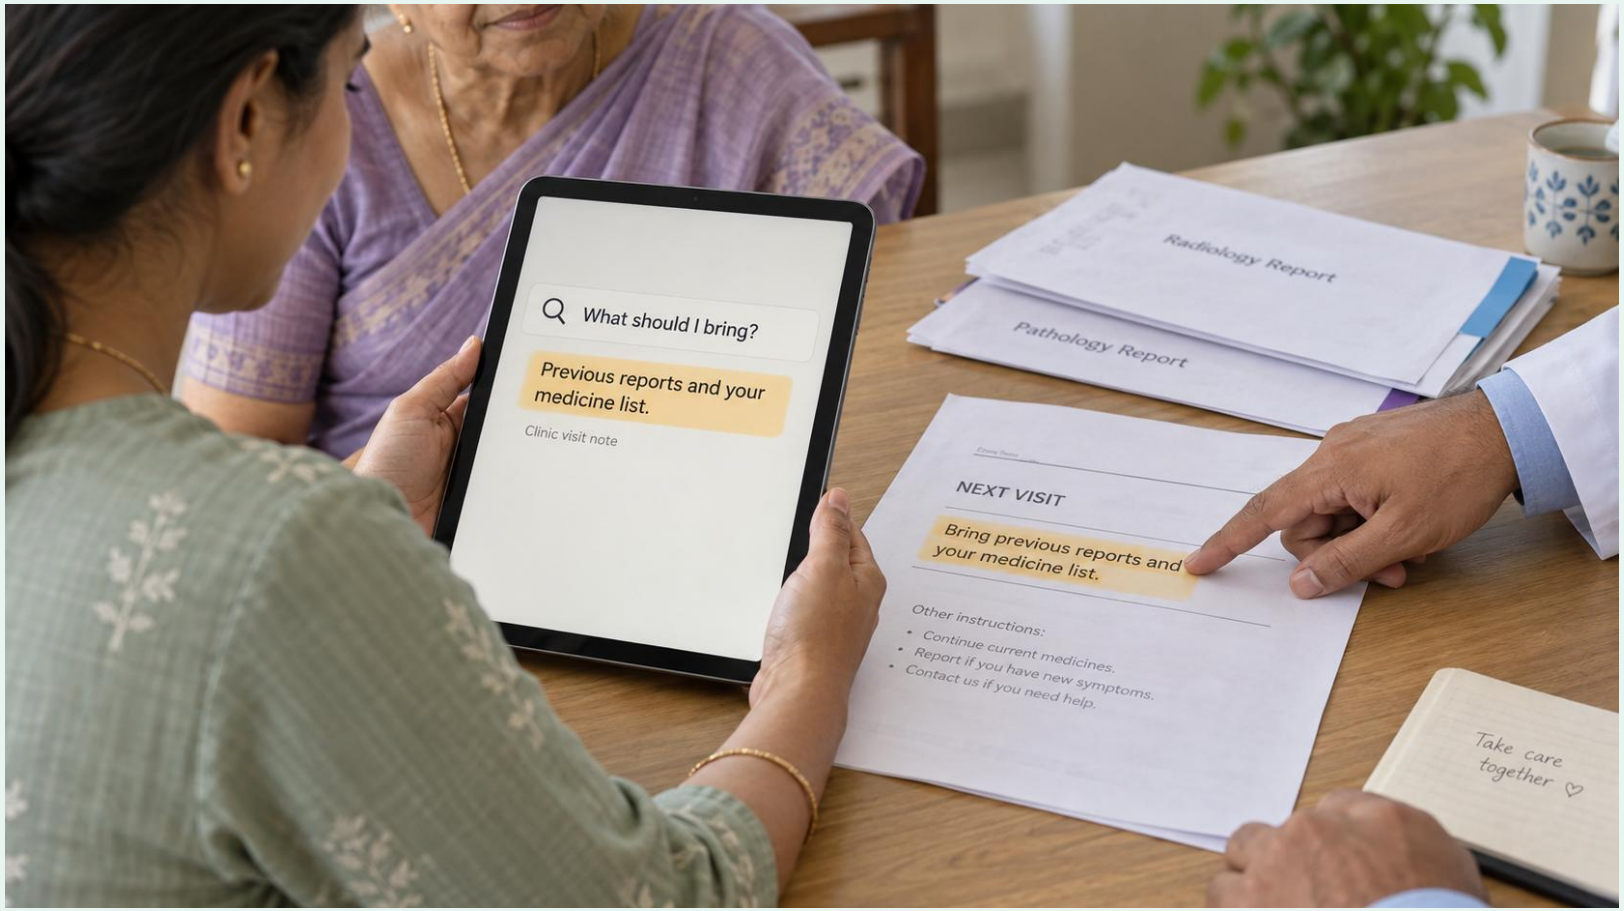

1. **Record with consent.**
2. **AI guides the physician through a structured goals-of-care discussion.**
3. **AI drafts the Care Note.**
4. **The physician reviews, edits and signs.**
5. **The patient reviews and signs.**

Download the signed Care Note and keep it ready for an emergency.

Sarvam AI can support Indian-language speech, translation and read-aloud.

AI helps doctors and families use patient records

With the patient’s permission, find answers and see the original passage.

1. Add a report.

Or a printed prescription.

2. Ask in your own words.

3. Check the original text.

Keep treatment dates in order.

Check medicine reminders before saving.

Help with palliative care near you

Map data: © OpenStreetMap contributors

Open the care map

Pallium India directory

1. Find palliative care nearby

Find palliative-care centres and hospitals, with phone numbers and directions.

2. Access to prescribed opioids

Ask about oral morphine, prescription documents and collection hours before travelling.

3. Find your cancer-specific support group

Find patient and caregiver groups for your cancer type, locally or online.

4. Plan travel and help at home

Write down who will handle a ride, home-nursing visit or medicine pickup.
