MENTOR BRIEFING
20 October 2026

A Palliative Care Companion

Help patients, families and clinicians keep one clear, source-linked record of what matters to the patient.

The core journey

01 **Listen.** Record a consented goals-of-care conversation.

02 **Review.** Check the transcript, original evidence and copied facts.

03 **Confirm.** A clinician reviews the exact note version; the patient confirms it.

04 **Share.** Share by choice, with recipient permissions, expiry and revocation.

What we have built

Connected care records: shared web/native roles, clinician review, patient/family confirmations, protected exact-version QR retrieval and assigned tasks.

Daily care on Android: medicines, visits, tasks, check-ins and reminders. Report originals stay available beside reviewed OCR and page/line-linked facts.

National directory: 1,631 public listings across all 36 states/UTs, with search, state filters, call/directions and source dates. These are directory entries, not verified facilities or live medicine stock.

Latest Android source: visible controls replace dropdowns/expanders; Latin + Devanagari OCR and on-device Hindi/English translation are added. Qwen3-ASR offline speech is included; Hindi/mixed-language phone validation remains pending.

Where we are now

The shared-care website is deployed. The updated Android test APK is built; 147 unit checks passed. Phone checks remain pending. Previous web/database checks passed: 284 web tests and 65 database checks.

Transcripts and translations require human review. Original report/audio files remain on the phone; shared notes do not synchronize those files. Generative clinical drafting and the promised Sarvam integration are not enabled. A clinician/family pilot is still to be arranged.

What we need from our mentor

1. Validate minimum goals-of-care content and clinician/patient consent roles.
2. Help shape a proposed 3-5 case clinician/family pilot and facility-data validation.
3. Decide whether CARE integration is needed, and the first useful exchange.

Open shared care | **Hospital survey (web only)**
