When the care conversation gets lost

Mannar, Kerala · PIB photograph, 2011 · Not the story patient.

Imagine a 62-year-old woman with advanced breast cancer receiving best supportive care.

At the clinic

Her doctor discusses her wishes. Only her husband attends.

Two months later

She becomes unconscious and reaches hospital. The doctor asks what she would want if her heart stopped.

The family disagrees

Her husband says yes. Her daughter says no. Her son calls from another city. No one can find the earlier discussion.

Families need the care plan, medicines, appointments and help in one place.

Why families need support between visits

 **15.6 lakh**

Estimated new cancer cases in India in 2024.

[IARC, GLOBOCAN 2024](#)

 **98.39%**

Estimated unmet palliative-care need across 10 cancer types, among people whose cancer had spread.

[Patil et al., 2024](#)

 **88%**

Wanted to choose treatment near the end of life. A 2019 survey of 2,400+ urban respondents.

[IndiaSpend; seven-city survey](#)

 **11.5%**

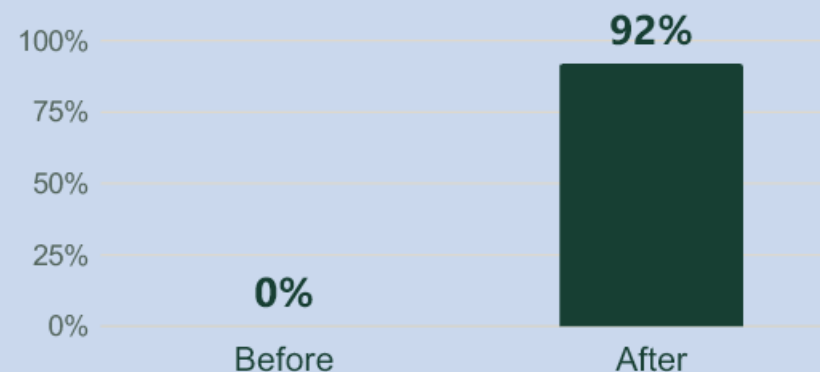

45 of 391 doctors had training in advance directives: written wishes for future care. One hospital.

[Jacob et al., CMC Vellore, 2026](#)

Different study groups. These are not results from Saathi.

One hospital improved documentation.

A standard process helped staff document discussions for 24 of 26 eligible patients.

Advanced pancreatic / colorectal cancer.

[Thangasamy et al., 2025](#)

Proposed 60–90 day study: compare before and after

Count patient requests and doctor-started discussions.

Count written and signed Care Notes separately.

Time finding records and track completed family jobs.

Saathi keeps your cancer care in one place.

[Medicines and prescription reminders](#)

[Visits, tests and treatment dates](#)

[Journals, support groups and shared family jobs](#)

AI prepares the note. People check and sign it.

The conversation stays with the family after the visit.

A screenshot of a mobile application interface titled "Voice note". At the top is a microphone icon. Below it is a toggle switch labeled "Everyone agreed to recording and live captions". A large blue button labeled "Start recording" is in the center. Below that is a dropdown menu showing "English". At the bottom is a dashed-line box containing the text "Upload audio".

Every signed Care Note stays in the history.

1. Record with permission.

2. AI prepares a draft.

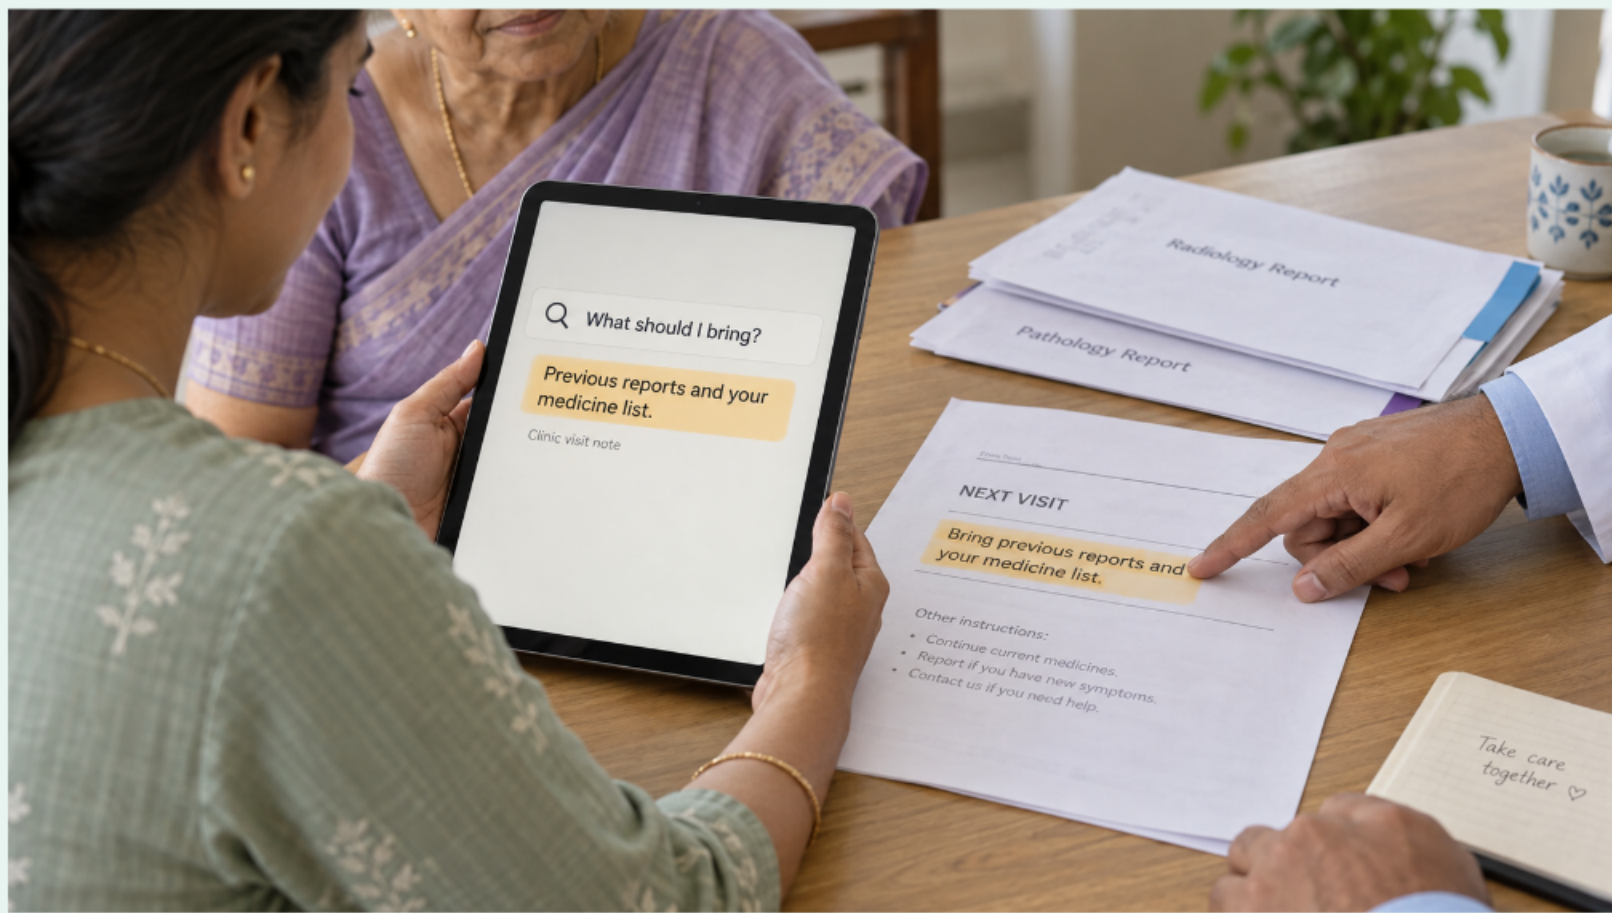

3. The doctor checks and signs.

4. The patient reviews and signs.

AI helps families and doctors use patient records.

With the patient's permission, find answers and see the original passage.

1. Add a report.

Or a printed prescription.

2. Ask in your own words.

3. Check the original text.

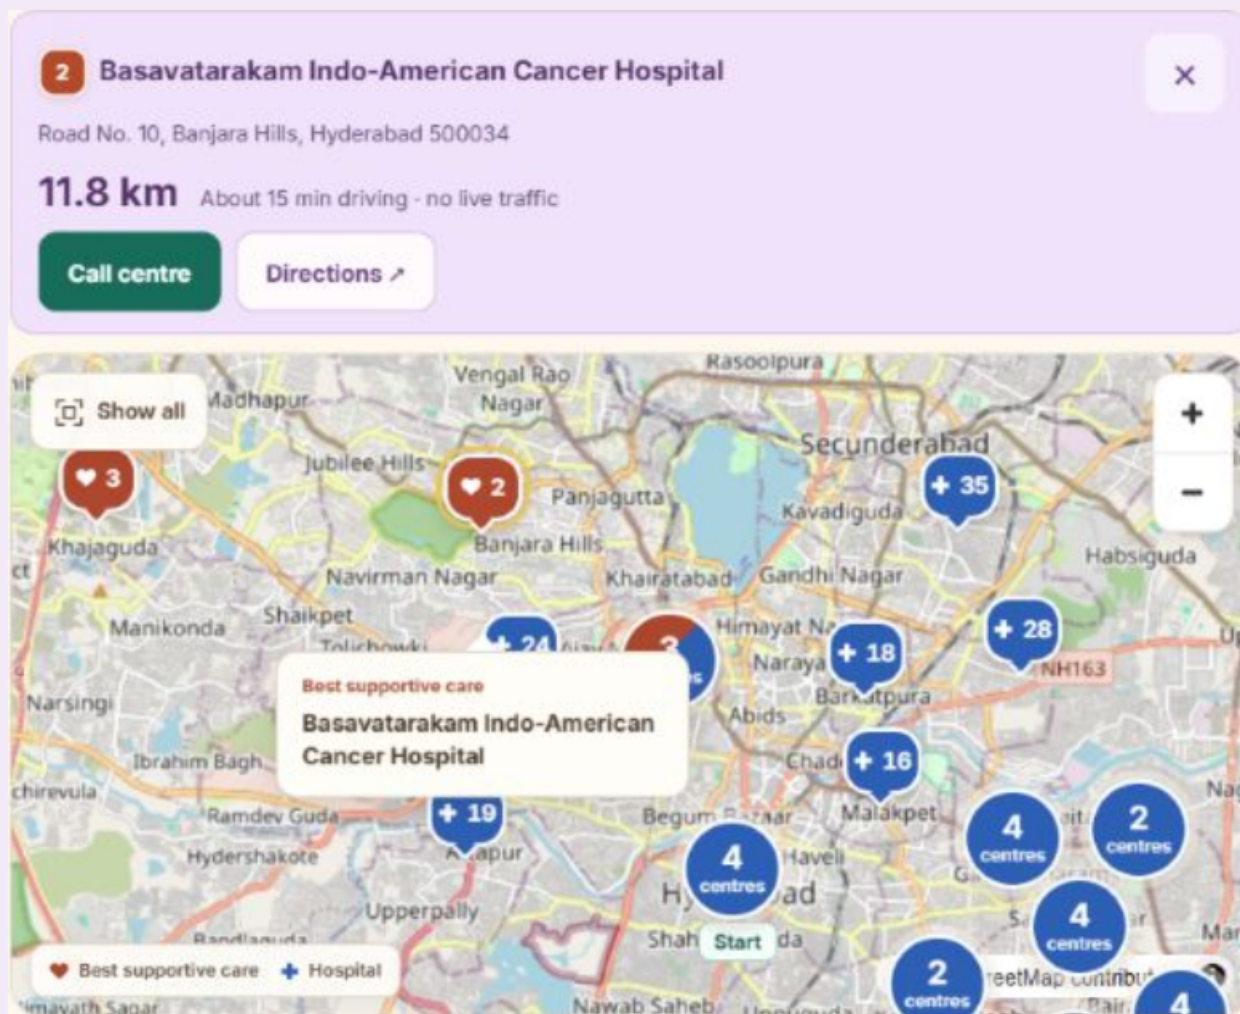

Keep treatment dates in order.

Check medicine reminders before saving.

After the visit, the family still needs help.

[Open the care map](#)

[Pallium India directory](#)

[Find care nearby](#)

Find best supportive-care centres and hospitals, with phone numbers and directions.

[Find prescribed medicines](#)

Ask about oral morphine, prescription paperwork and collection hours before travelling.

[Plan travel and help at home](#)

Name who will arrange a ride or ambulance, home nursing or medicine collection.

[Get help with care costs](#)

Track paid and pending bills. Prepare questions and paperwork for financial assistance.

[Give each job a person, a date and a confirmation.](#)
