Health-a-thon 2026

Sahara

A Palliative Care Companion

Zeros and Ones

Illustrative consultation. No real patient use shown.

Clinical and product work together

Member	Role	Focus
Dr Sharada Vinod Kutty	Doctor partner	Clinical workflow
Dr Sujay Halkur Shankar	Clinician	Care framework
Shaik Abdul Basith	Technical lead	Product and engineering
Shaik Muhammad Awaiz	Technical member	Web and Android
Shirin Ayub	Medical student	Clinical input

Doctor specialities, biographies and photos remain to confirm.

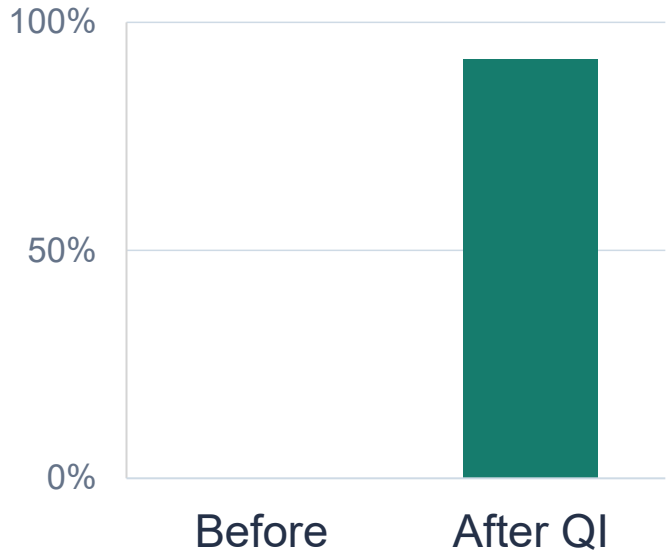

The problem

The next team needs the earlier conversation

Illustrative family scene

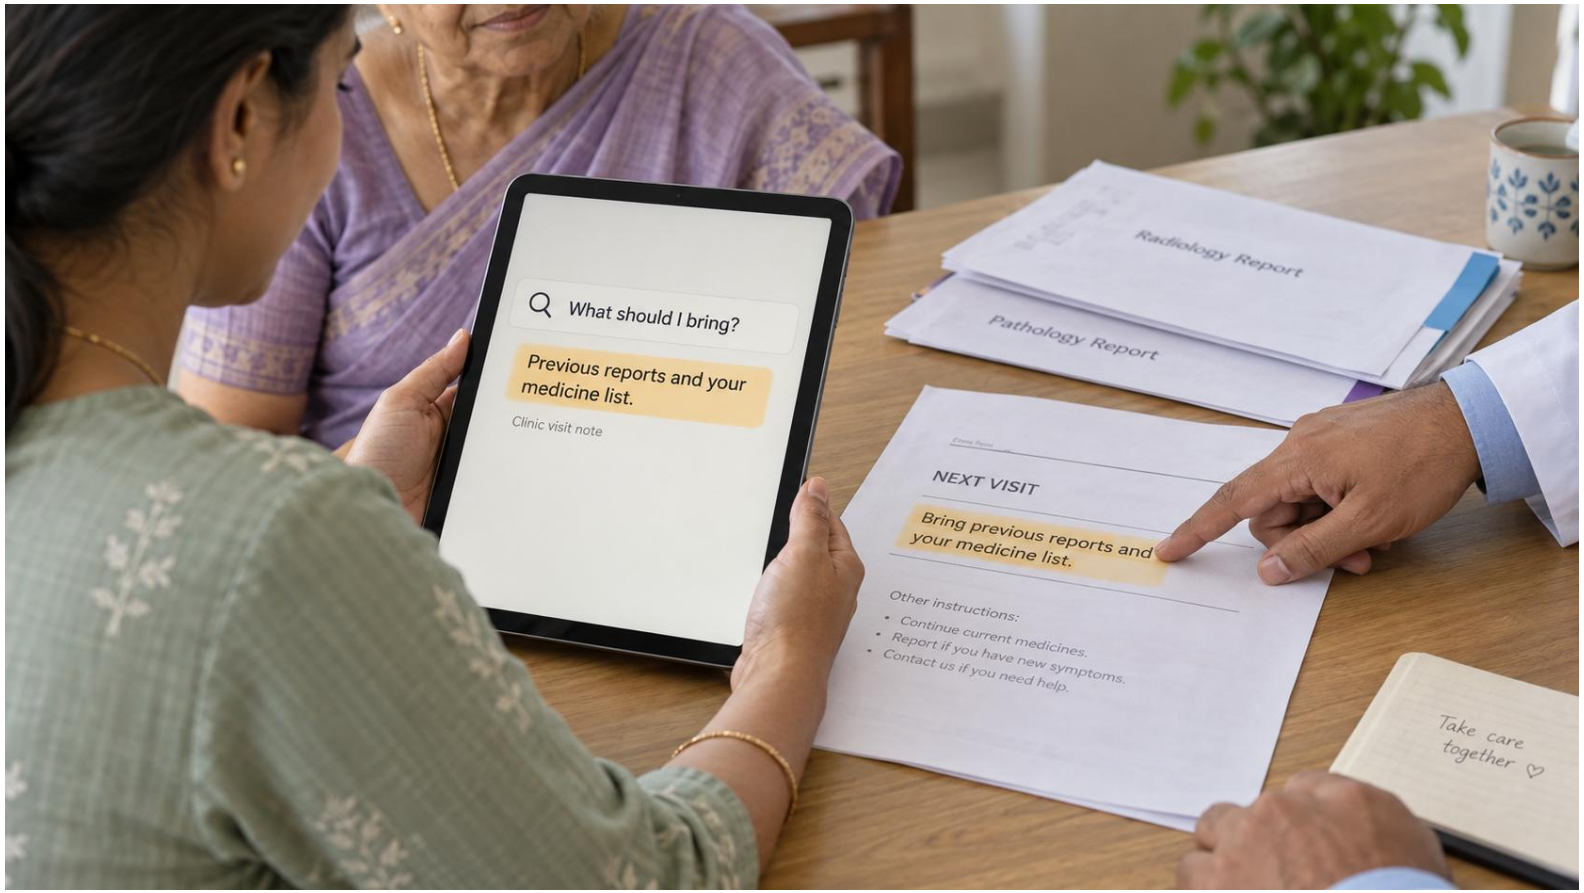

92% documented after QI

24/26 documented Chennai QI study

External study, not Sahara results

People and care setting

Patient and family

Say what matters.
Check the exact note.

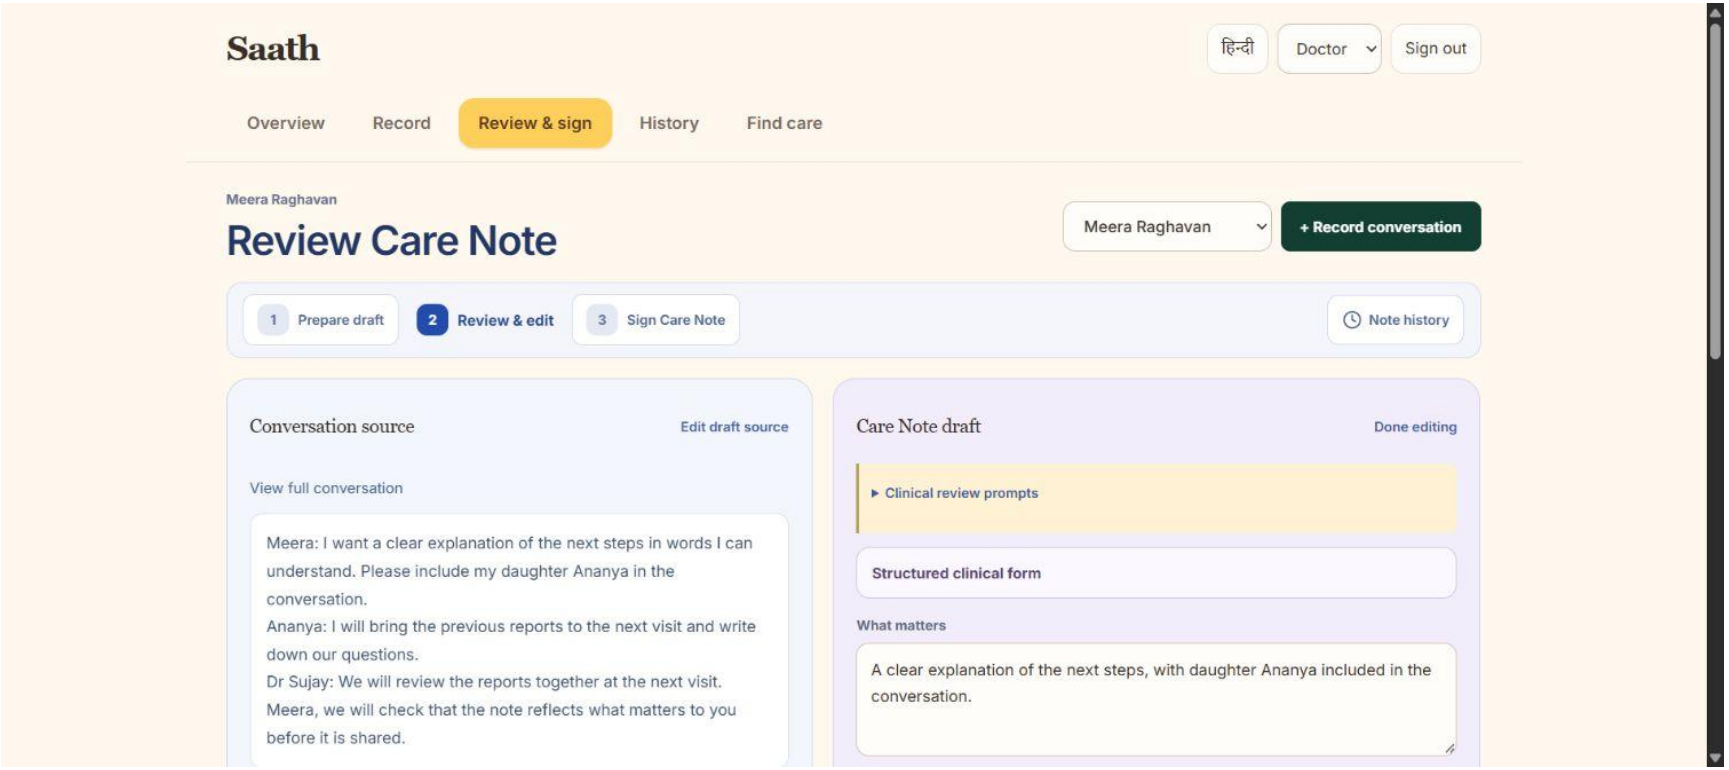

Clinician

Lead, review
and revisit care.

Across clinic, home and the next care encounter

Illustration from Round 1. Clinical pilot not yet validated.

Source beside the Care Note

1 Consent + original

2 Clinician review

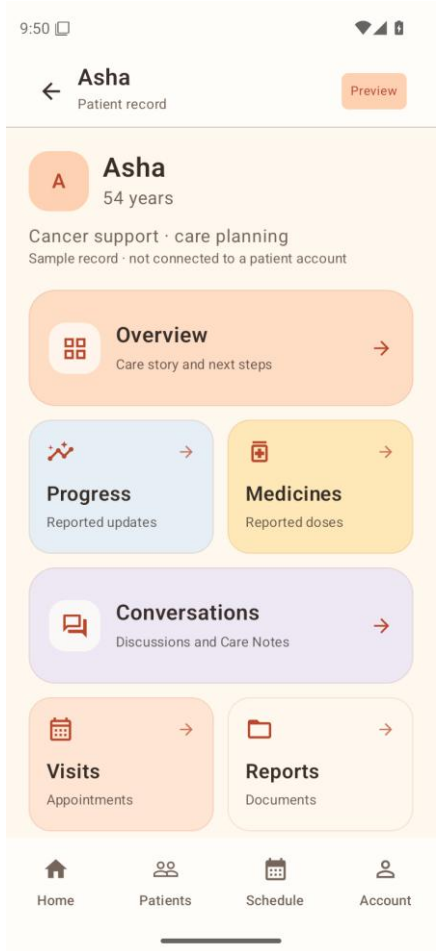

3 Release version

4 Exact-note confirmation

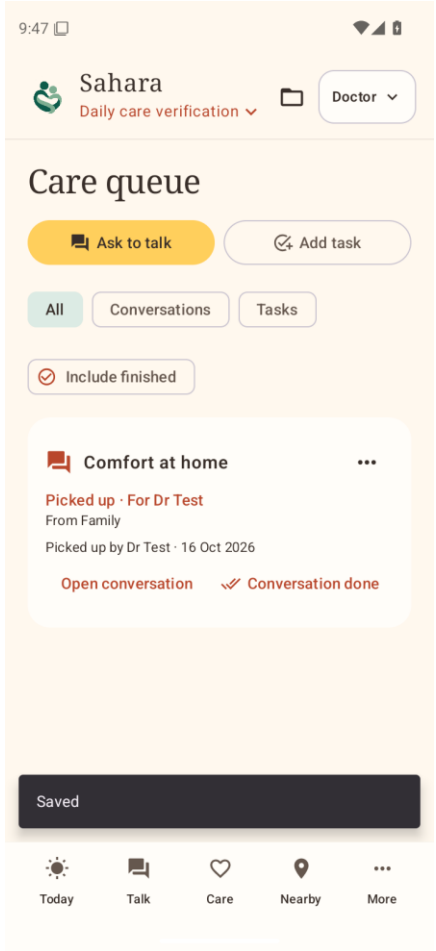

5 Permissioned retrieval

Actual web capture, 24 September. Fictional record and earlier name. Workflow is subject to clinical validation.

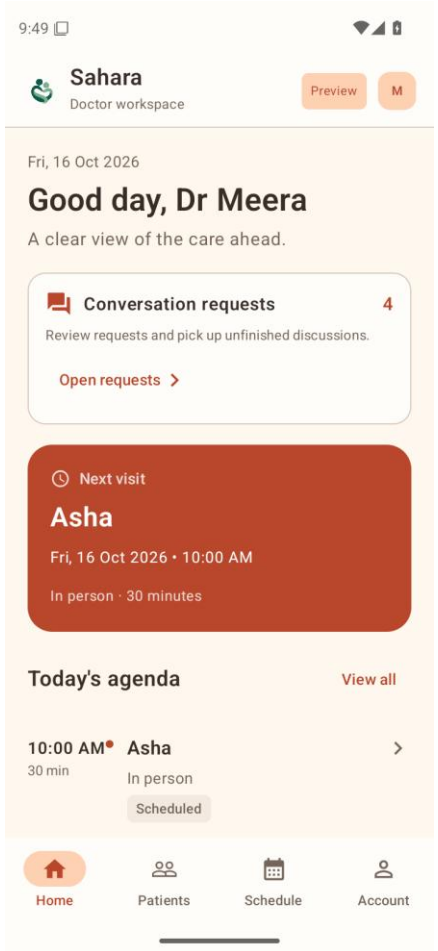

Working product

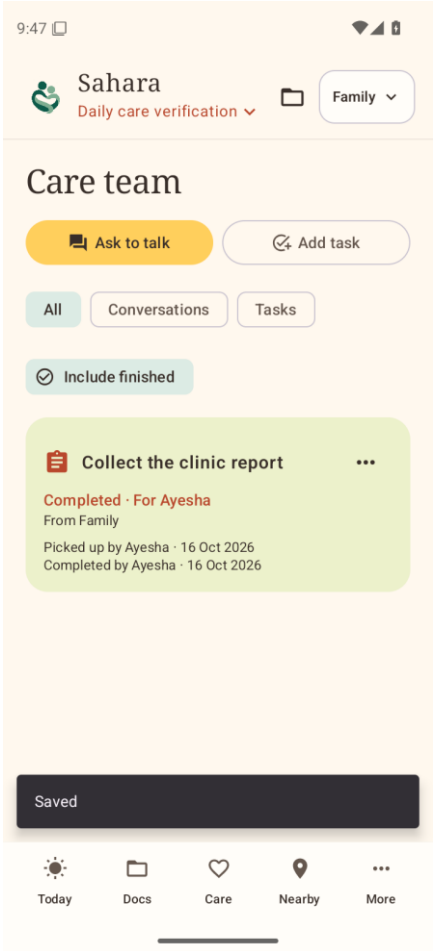

Family record

Request a discussion

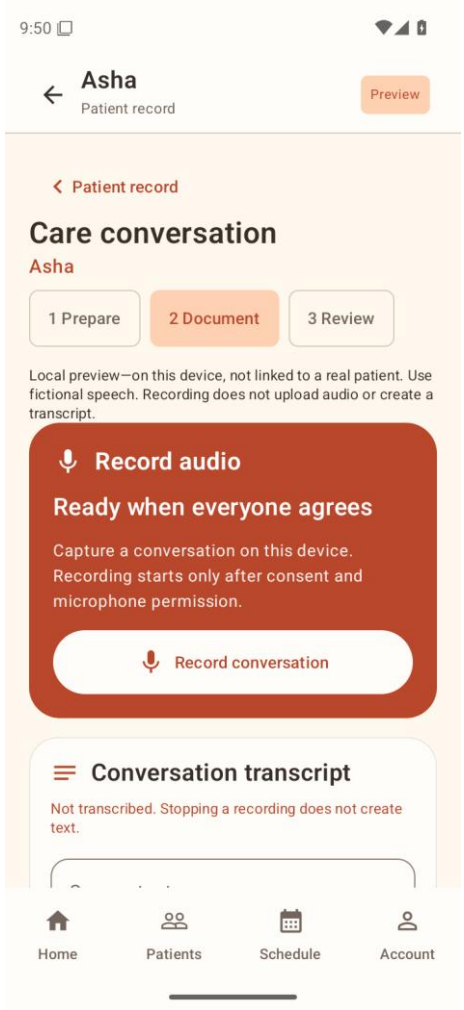

Clinician workspace

Follow-up task

Actual 0.5 emulator screens, 19 October. Fictional fixtures. Current 0.6 handset verification remains pending.

Technology and AI

On the phone

Hindi / English speech
Qwen3-ASR

OCR and translation
Editable corrections

Originals stay private

Approved notes only

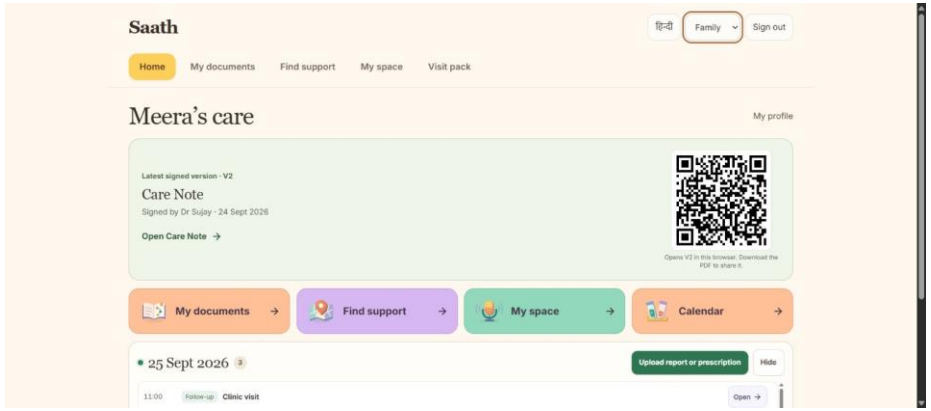

Shared accounts
Access rules

CARE extension Proposed

Kotlin, Compose, Room, MapLibre and Supabase. Cloud patient scanning and generative clinical drafting stay off.

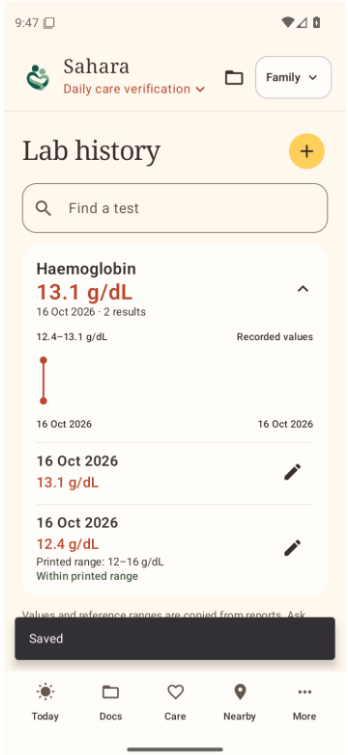

Build progress

September

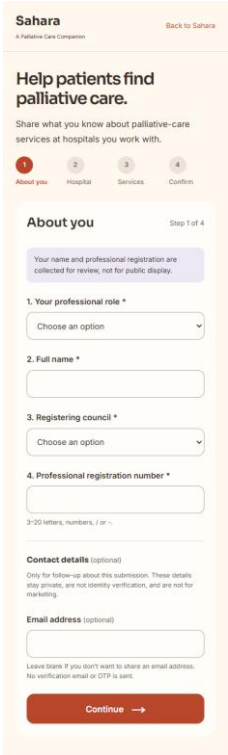

Web Care Note

19 October

Native care tools

23 October

Hospital survey

Dated actual screens. Earlier records are fictional. Latest 0.6 debug APK adds local language tools.

Evaluation

147

Native checks

284

Web checks

65

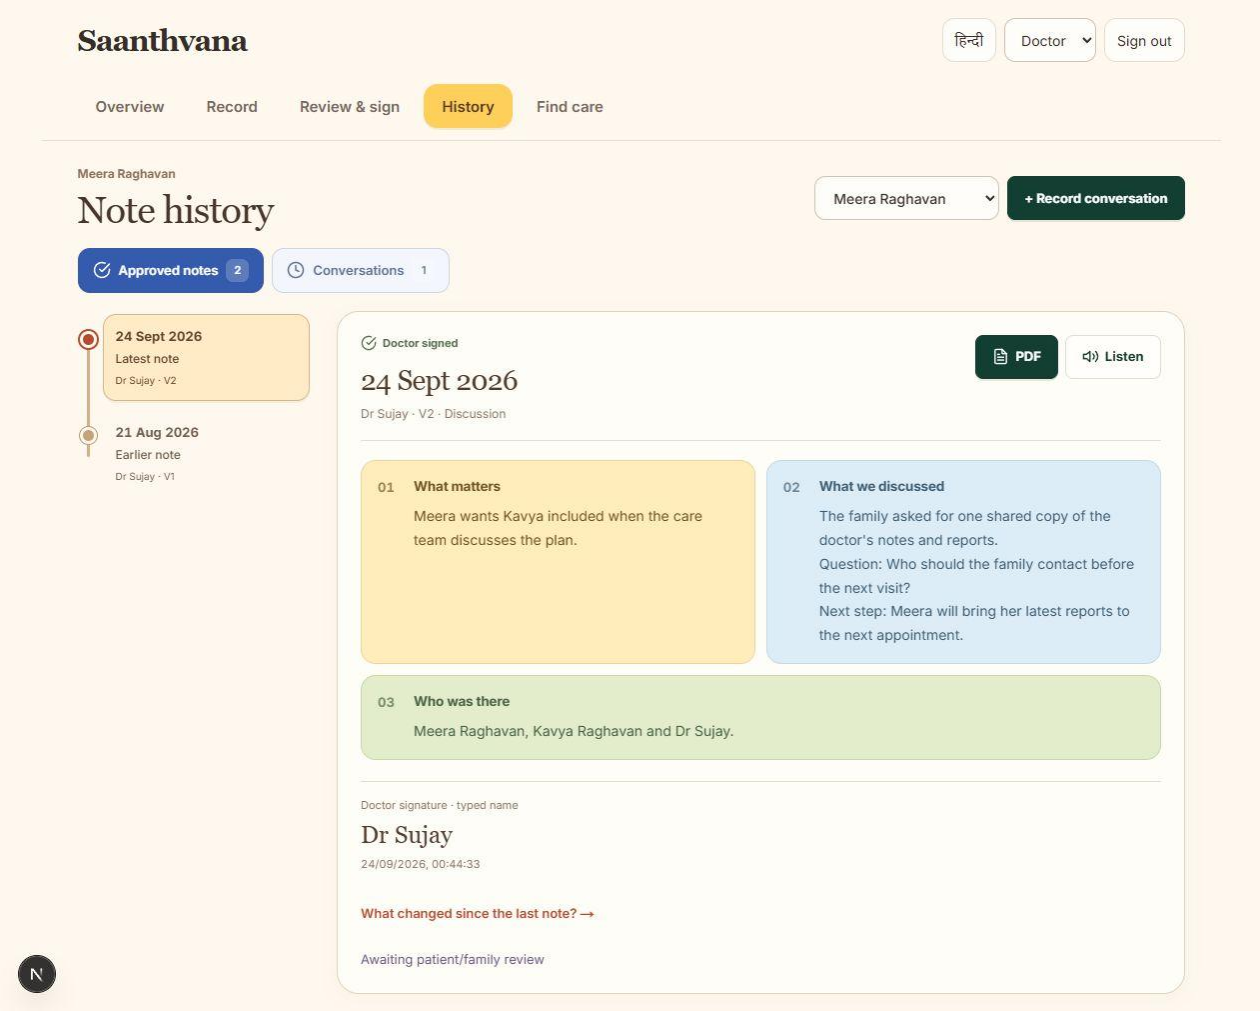

Database checks

Speech fixture	Audio / inference	Observed
Synthetic English	7.15 s / 5.95 s	Exact on one clip
Public Hindi	9.12 s / 22.05 s	Word substitutions
Public Hinglish	8.28 s / 22.53 s	Word / script errors

Next evidence: handset + clinician evaluation

Checks dated 19–20 October. Speech timings are desktop CPU tests, not clinical accuracy or phone performance.

Safety and responsible AI

Named review

Check the source before release

Exact version

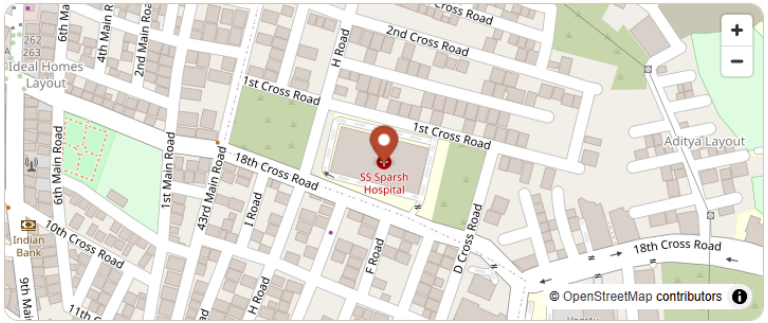

Patient and family confirm separately

Permissioned access

Historical fictional UI. Current access includes expiry/revocation. Patient use needs clinical oversight and validation.

Deployment and cost

Cost area	Planning basis
One-time	Onboarding, devices, clinical validation
Ongoing	Hosting, database, support and governance
Per transaction	Local AI: no cloud call fee
Price / payer	Facility / NGO / government proposal

A supported clinical pilot

Amounts remain to confirm. Map: 23 October QA, OpenStreetMap contributors. No partner adoption claimed.

Before patient use

1 **Validate on phones**

Hindi / English accuracy

2 **Agree a clinical pilot**

Consent, review and escalation

3 **Measure the care flow**

Retrieval and understanding

CARE clinician extension

Prototype after the core pilot

Public solution information: Yes

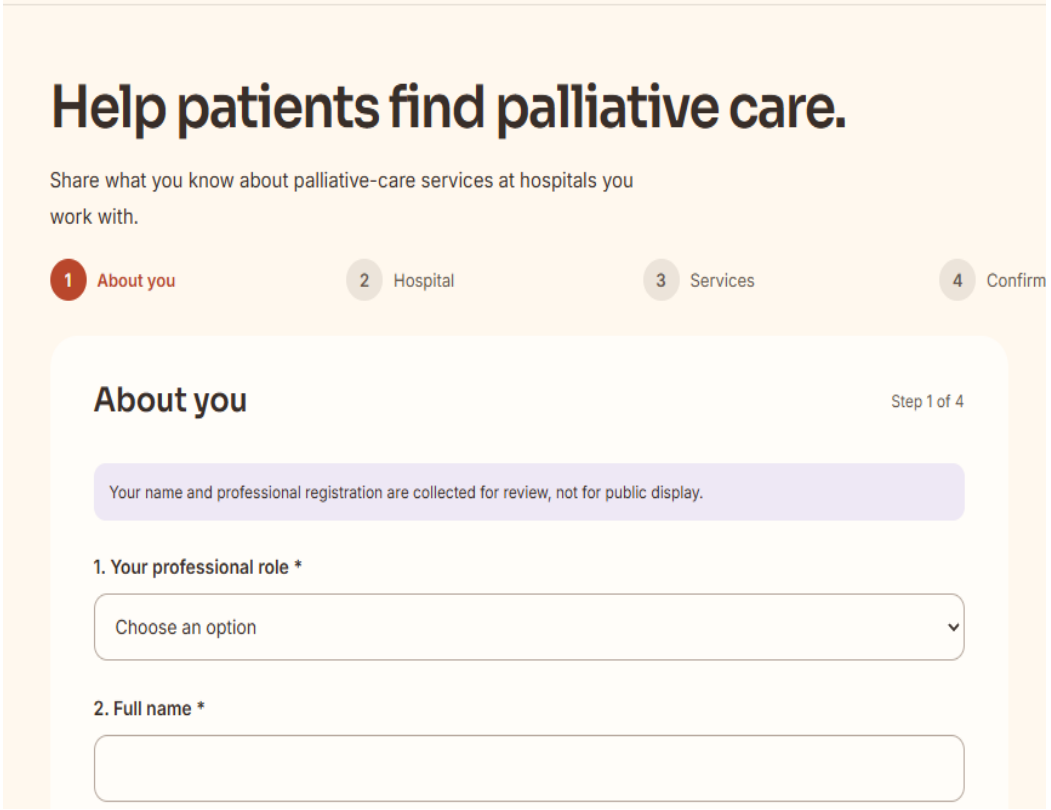

Shirin’s clinical symptom-tracker input remains pending. Team code, costs and narrated video still need confirmation.
