Companion

Saathi is a palliative care companion that helps align cancer care with the patient's values and makes care easier to access.

When the patient's voice is lost

A 62-year-old woman with advanced breast cancer receives best supportive care.

Mannar, Kerala · PIB photograph, 2011 · Not the story patient.

At the clinic

Her doctor discusses her wishes. Only her husband attends.

Two months later

She becomes unconscious and reaches the Emergency Department. The doctor asks if she wanted CPR if her heart stopped.

The family disagrees

Her husband says yes. Her daughter says no. Her son calls from another city. No one can find the earlier discussion.

Families need the patient's wishes to guide care when the patient cannot speak.

Why a palliative care companion is needed

 **15.6 lakh**

Estimated new cancer cases in India in 2024.

[IARC, GLOBOCAN 2024](#)

 **98.39%**

Estimated unmet palliative-care need in metastatic disease across 10 cancer types.

[Patil et al., 2024](#)

 **88%**

Surveyed patients wanted to choose their end-of-life treatment. 2,400+ urban respondents with a recent hospital stay (2019).

[IndiaSpend; seven-city survey](#)

 **11.5%**

45/391 doctors had training in advance directives and their practical aspects. One hospital.

[Jacob et al., CMC Vellore, 2026](#)

Different study groups. These are not results from Saathi.

Goals-of-care discussion

A clinician-led conversation about a patient's values, priorities and care preferences, used to agree care goals with the patient and, with consent, their family.

A standard procedure improved goals-of-care documentation to 92% (24/26 eligible patients).

Advanced pancreatic / colorectal cancer, Chennai.

[Thangasamy et al., 2025](#)

Proposed 60-90 day study: compare before and after

Number of patient- and doctor-initiated goals-of-care discussions.

Number of written and signed Care Notes per cancer facility.

Time to retrieve goals-of-care discussions during an emergency.

Physician leads. AI assists

The physician initiates the goals-of-care discussion. AI provides a structured guide.

Every version of the goals-of-care discussion stays in the Care Note history.

-  1. Record with consent.
-  2. AI guides the physician through a structured goals-of-care discussion.
-  3. AI drafts the Care Note.
-  4. The physician reviews, edits and signs.
-  5. The patient reviews and signs.

Planned: an encrypted Care Note for the patient to keep for emergencies.

[Planned with Sarvam AI: Indian-language speech, translation and read-aloud.](#)

Help with palliative care near you

[Open the care map](#)

[Pallium India directory](#)

1. Find palliative care nearby

Find palliative-care centres and hospitals, with phone numbers and directions.

2. Access to prescribed opioids

Ask about oral morphine, prescription documents and collection hours before travelling.

3. Find your cancer-specific support group

Find patient and caregiver groups for your cancer type, locally or online.

4. Plan travel and help at home

Arrange a ride or ambulance, home nursing or medicine collection with your care circle.

AI helps families use patient records

With the patient's permission, find answers and see the original passage.

1. Add a report.

Or a printed prescription.

2. Ask in your own words.

3. Check the original text.

Keep treatment dates in order.

Check medicine reminders before saving.

Saathi also keeps your cancer care in one place
