

Saanthvana meeting minutes

Zeros and Ones | Product review and Round 1 | Updated 22 September 2026

Help cancer patients and families understand what was agreed with the care team, know what needs doing next, and work from the same care plan. Goals-of-care conversations stay at the centre.

Agreed in the meeting

Keep the app simple: Patient & family entry, three home groups, direct feature pages and a quick care-note QR.

Use the team's clinical form. Reuse profile details, record who joined each discussion, let the doctor sign first, then let the patient/family review that exact version. Keep Finish later and previous-note context.

Keep the symptom diary, journal and palliative-care map. Separate cancer documents from monitoring results; prioritise treatment milestones. Medicine reminders should come from reviewed typed prescriptions.

Keep home help to nursing, transport and medicines/equipment. The meeting removed fundraising, cost-help and daily family tasks from the main flow.

Already in the app

- ☒ Grouped home, separate routes, Patient & family entry and editable profile.
- ☒ Care-note review screens, typed signatures, version history and PDF export.
- ☒ Grouped reports, dated results, treatment calendar and separate symptom ratings.
- ☒ Palliative-care markers/directions, focused home-help categories and journal.

Next actions

- ☐ **Complete the core flow.** Finish the clinical form, account/registration checks, consented family access and controlled sharing. Connect conversation transcription and document answers with sources and human review.
- ☐ **Align with Family & Caregiver Support (added 22 September).** Keep goals-of-care central; connect appointments, medicines, care instructions, milestones, practical help, costs and emotional support through simple shared tasks, education and timely alerts. Revisit only the useful cost/task features; keep fundraising out.
- ☐ **Validate and finish the entry.** Check extraction, reminders, centre details and the clinician/family journey. Revise the 6-8 slide deck around one complete care journey, with the product URL/QR and walkthrough. Keep AI assistive and remove any clinical scoring or advice from accessible routes.

Review and submission

Review: 23rd. Finalise/upload: 24th. Deadline discussed: 25th.

Full transcript saved unchanged. Detailed gaps and official use-case mapping: Truly Left.md.
